

Driving Data to Drive Business

Pingahla's Talend Data Quality Accelerator

Finding and fixing quality problems in your data can be the difference between business success and failure. If not properly identified and addressed, errors in your data can cost your company millions, resulting in missed revenue opportunities and exposing your company to unnecessary risk. The right approach to finding and fixing quality problems requires that you leave no domain, no application, no geography uncovered, and that you get all the right people on board and help them take responsibility.

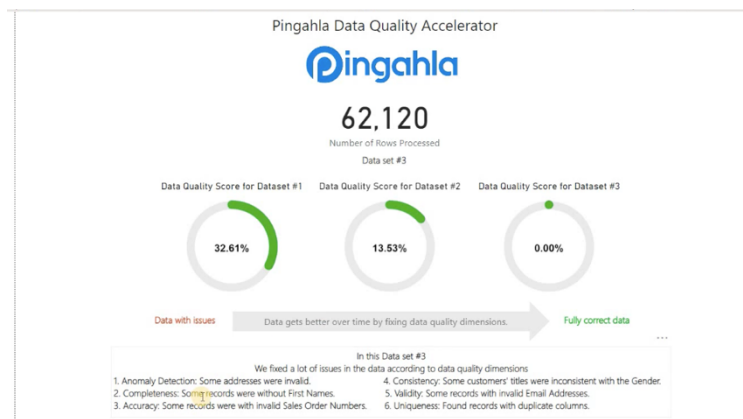

Pingahla's Talend Data Quality Accelerator empowers your company to take a holistic approach to managing data quality across the enterprise. The Pingahla's Accelerator along with Talend software transforms your data quality processes to be a collaborative effort between business users and IT. This creates a true data-driven environment that supports better business decision making regardless of your data's size, format, or platform. It delivers authoritative, trusted data to all stakeholders, projects, and business applications - on premise, or in the cloud

With Pingahla's Talend Data Quality Accelerator, your entire organization can::

- Proactively monitor and cleanse data across the enterprise
- Enable business and IT collaboration in the governance of data
- Achieve better business outcomes and maximize your return on data

Pingahla's Talend Data Quality Accelerator helps provide the following data quality insights;

- Anomaly Detection
- Completeness
- Accuracy
- Consistency
- Validity
- Uniqueness

Pingahla is an innovative data management and analytics solution company and Talend Gold Partner, offering elegant solutions to complex business challenges. Our mission is to help organizations grow by providing them with products and services that optimize their operation, enhance customer journey, and implement their corporate strategy. We proffer focused expertise across numerous industry verticals, disciplines and technologies. Our cutting-edge approach helps to extract full potential from your data.
